Academic OPEN SOURCE solutions

Digital Services

- Implement reusable and adaptable solutions so each institution can adjust the technological groundwork to fit its own strategy and needs
- Share the same strategy: use a portal as a single entry point to access heterogeneous services and information (e-learning platform, virtual desktop, ECM, etc.)
- Customize content and functionality range based on the user’s profile
- Take into account mobile users when creating or modifying a service: provide a responsive UI
- Provide trainings, share best practices and assist developers and integrators so they can deliver suitable services and offer the best experience possible to the end users

Apereo OAE: A next-gen collaborative tool

- Open-source platform promoting collaboration and sharing between users
- Provides rich academic networking capabilities
- Embraces a new vision for academic collaboration, integrating a powerful real-time editing tool
- Includes numerous content authoring capabilities
- Supports multiple institutions on the same instance, at the same time (multi-tenancy feature)
- Simplifies both development and integration with external systems thanks to its widget-based architecture
- Offers a responsive design to provide an adaptive interface and better support mobile devices

The French Ministry of Higher Education and Research supports the Consortium, notably with regard to the evolution of digital plans and services for training, employability and academic life and for its international collaboration with Apereo.
