

Configuring user profile retrieval

See also: [Customizing user profile retrieval](#)

- [Attributes printed](#)
- [Tetsvalues](#)

User profiles are retrieved from the LDAP directory, using the following properties (set in **/properties/config.properties**).

Attributes printed

The (comma-separated) list of the LDAP attributes that will be printed:

```
#userInfo.ldapAttributes=
```

If this property is left empty (by default), all the LDAP attributes retrieved are printed.

All the attributes set here must be retrieved from the LDAP directory (see Configuring the LDAP access).

Tetsvalues

This property is used when running the ant task **test-user-info**:

```
#userInfo.testUserId=paubry
```
