

03 Create the esup-helpdesk project

Create the esup-helpdesk project by checkout from the SVN repository <http://subversion.cru.fr/esup-helpdesk/trunk/esup-helpdesk>.

The esup-helpdesk project must be installed exactly at the same location as the esup-commons, as ../esup-commons is used to get the esup-commons project from the ant tasks of the esup-helpdesk project. If the esup-commons project has been installed in C:\devel\esup-commons, then install the esup-helpdesk project in C:\devel\esup-helpdesk.

- Drag the **build-devel.xml** file to the *ant* view (this file should be used when developing *esup-helpdesk*, not **build.xml**!)
- Launch the **_prepare** task to create the folders
- Set up the *build path* of the *esup-helpdesk* project:
 - Define **/src** as the source folder
 - Define **/build/WEB-INF/classes** as the output folder
 - Make the *esup-helpdesk* project depend on the *esup-commons* project
 - Import all the jars found in the folder **/webapp/WEB-INF/lib**

Your esup-helpdesk project is now ready to be used.

Ant tasks

When developing *esup-helpdesk*, the tasks prefixed by **_** (underscore) should be used. For instance, use **_start**, not **start**!
