

04 - Gestion des groupes locaux

Fonctionnement

Les groupes permettent de gérer les utilisateurs et les catégories de portlets.

Ils permettent de créer une arborescence de groupes qui peut inclure des groupes PAGS.

Catégorie des portlets

Exemple : *Administration.group-membership.xml*

```
<group script="classpath://org/jasig/portal/io/import-group_membership_v3-2.crn">
  <name>Administration</name>
  <entity-type>org.apereo.portal.portlet.om.IPortletDefinition</entity-type>
  <creator>system</creator>
  <description>Administrative Portlets</description>
  <children/>
</group>
```

Groupe d'utilisateurs

Groupe des administrateurs : *Portal_Administrators.group-membership.xml*

```
<group script="classpath://org/jasig/portal/io/import-group_membership_v3-2.crn">
  <name>Administration</name>
  <entity-type>org.apereo.portal.portlet.om.IPortletDefinition</entity-type>
  <creator>system</creator>
  <description>Administrative Portlets</description>
  <children/>
</group>
```

Groupe des fragment-layout : *Fragment_Owners.group-membership.xml*

```
<group script="classpath://org/jasig/portal/io/import-group_membership_v3-2.crn">
  <name>Fragment Owners</name>
  <entity-type>org.apereo.portal.security.IPerson</entity-type>
  <creator>system</creator>
  <description>These are fragment layout owner accounts</description>
  <children>
    <literal>academics-lo</literal>
    <literal>admin-lo</literal>
    <literal>all-lo</literal>
    <literal>campus-lo</literal>
    <literal>developer-lo</literal>
    <literal>faculty-lo</literal>
    <literal>fragmentTemplate</literal>
    <literal>guest-lo</literal>
    <literal>news-lo</literal>
    <literal>staff-lo</literal>
    <literal>student-lo</literal>
    <literal>tenant-admin-lo</literal>
    <literal>welcome-lo</literal>
  </children>
</group>
```

Gestion d'une arborescence

Exemple groupe racine : *Everyone.group-membership.xml*

```
<group script="//org/jasig/portal/io/import-group_membership_v3-2.crn">
  <name>Everyone</name>
  <entity-type>org.apereo.portal.security.IPerson</entity-type>
  <creator>system</creator>
  <description>All Users</description>
  <children>
    <group>Authenticated Users</group>
    <group>PAGS Root</group>
    <group>Faculty</group>
    <group>Guests</group>
    <group>Portal System</group>
    <group>Staff</group>
    <group>Students</group>
    <group>Tenant Administrators</group>
    <group>Tenants</group>
  </children>
</group>
```

Installation

- Pour enregistrer tous les groupes
 - `./gradlew overlay:uPortal:dataImport -Ddir=data/esup/group-membership`
- Pour enregistrer un seul groupe
 - `./gradlew overlay:uPortal:dataImport -Dfile=data/esup/group-membership/Fragment_Owners.group-membership.xml`
