

Configuring the data initialization

The property below, set in **/properties/config.properties**, tells the unique id of the first administrator of the application. It is used when running the ant task **init-data** which initializes the database and creates the first objects.

```
#init.firstAdministratorId=paubry
```

The first administrator of the application

It can be a local user (e.g. **paubry**) or an external user (e.g. **pascal.aubry@univ-rennes1.fr**).
