

# Configuring portal information access

- [Web service URL](#)
- [Test values](#)

Most of the information on users is normally retrieved through LDAP access, but it is also possible to access the following portal information:

- user attributes
- portal groups

## Using portal information retrieval

A web service must be installed on the portal (see [esup-portal-ws](#)).

## Web service URL

The URL that provides the esup-portal-ws web service:

```
#portal.webServiceUrl=[http://portal.domain.edu/services/UportalService]
```

## Test values

The properties below are used when running the ant task **test-portal**:

```
#portal.testUser=smith  
#portal.testGroupId=local.0  
#portal.testGroupName=Everyone
```
