Important note

This page explain only specific parts useful for migrations from an old version !

Migration

From NewsPortlet 2.0.6 and upper to Esup-News 0.2.X

Updating the database

- select the script of you version for the update in **build.properties** with property **db.filename**

```
# Make your choice on the good script to update your database, please uncomment/comment only
db.filename=update_mysql_newsPortlet-2.0.x_to_esup-news-0.2.0.sql
#db.filename=update_mysql_2.0.6_to_2.1.0.sql
#db.filename=update_mysql_2.1.0_to_2.2.0.sql
#db.filename=update_postgresql_newsPortlet-2.0.x_to_esup-news-0.2.0.sql
```

By default the good script is selected, if you have a MySQL database, else if you have a PostgreSQL database comment the uncommented line and uncomment this line : `db.filename=update_postgresql_newsPortlet-2.0.x_to_esup-news-0.2.0.sql`.

The PostgreSQL script migration wasn't tested, it's sure there will be one problem, you will need to deactivate constraints checking before to pass the script.
Please contact us if you have problems or to share your tips to solve this problem.

- run **ant db-update** after configuring databases configuration in **build.properties**

Replacing NewsPortlet by Esup-News in the portal

- In the channel manager of the portal go on "Modify a currently published channel" and modify the channel of your NewsPortlet. You will have only to modify the property **Portlet definition ID** to **<app.name>.news**, where **<app.name>** is setted in **build.properties**
