

ESCO-Grouper UI

ESCO-Grouper UI

Presentation

RECIA has a UI for grouper named ESCO-Grouper UI.

ESCO-Grouper UI uses Fluid.

ESCO-Grouper UI can be used in servlet mode (portlet mode works only with uPortal 2.6 and https).

It's possible to make plug-ins to extend features of the UI. For example, we made the "dynamic group" module, but we can imagine a module for discussion lists, for samba shares, etc.

ESCO-Grouper UI uses Grouper API, currently in version 1.6.3.

This UI is fully configurable :

- Screens (fields, names of the elements, columns of the tables,...)
- Search filters,
- ...

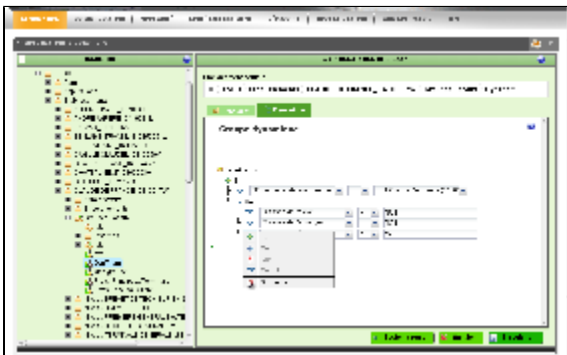

It was developed with fluid elements for a user friendly interface :

- Contextual menu depends on the rights of the user,
- Drag and drop to move groups,
- Rights displayed when hovering the mouse over all the elements of the tree,
- Single click Subscriptions,
- Dynamic groups (with the dynamic group hook in Grouper)
- ...

It offers a lot of functionalities :

- Possibility to define profiles : all functionalities, only the tree of the folders and groups, only the subscription page, etc.
- On line Help on each page,
- Research of people in groups,
- ...
